MUSTAFA AVCU

SOFTWARE ENGINEER | MACHINE LEARNING | GENERATIVE AI | AWS

New York, NY | itsavcu@gmail.com | (323) 369-1727 | LinkedIn | Github

PROFESSIONAL SUMMARY

Software engineer with 4 years of experience at Amazon building scalable backend services, event-driven data processing pipelines and reusable machine learning infrastructure across advertising and customer service chatbot domains. Hands-on AWS experience with strong Python, Java, Scala, SQL skills and a deep learning background. Built guardrails for Amazon's first LLM-powered customer service chatbot and shipped a customer issue prediction model that cut average chatbot interaction time by 9%.

TECHNICAL SKILLS

Languages: Python, Java, Scala, TypeScript, SQL, JavaScript, C++
Cloud & Infrastructure: AWS, CDK, CloudFormation, Lambda, Step Functions, S3, DynamoDB, SQS, SNS
Data Engineering: Spark, Glue, EMR, ETL data pipelines, AWS Clean Rooms
AI/ML: Large Language Models (LLMs), Generative AI, guardrails, Keras, TensorFlow, SageMaker, Bedrock
Engineering: CI/CD, Docker, Git, infrastructure as code, microservices, REST APIs, on-call support

PROFESSIONAL EXPERIENCE

Amazon | Software Development Engineer II

Seattle, WA & Toronto, ON | August 2022 – June 2026

- Implemented a guardrail layer in a new LLM orchestration service connecting generative AI models to Amazon's customer service chatbot; validated customer inputs and model outputs to ensure safe, appropriate interactions, enabling the launch of Amazon's first LLM-powered customer support experience.
- Designed and built reusable ML infrastructure using Amazon SageMaker and CI/CD pipelines to automate model training, testing, and deployment for customer service chatbot workflows.
- Deployed a machine learning model using the infrastructure above to infer customer issues and route them to relevant support workflows, reducing average chatbot interaction time by 9% (440 seconds to 400 seconds) with no negative impact on other metrics.
- Owned Retailer Ad Service's attribution integration with Amazon Demand-Side Platform (ADSP), expanding beyond Sponsored Products (SP) to support display and video ads; built unified ETL data pipelines and developed attribution logic in Spark SQL within AWS Clean Rooms to jointly perform attribution across both ad programs.
- Redesigned the Retailer Ad Service's catalog ingestion architecture to support catalogs with 2M+ offers refreshed every two hours; root-caused 300ms+ upsert latency to redundant updates from misordered category normalization; fixed the update check to skip unchanged offers without breaking downstream obsolete offer detection workflow.
- Reduced OpenSearch ingestion traffic for the catalog service by 90% by filtering out timestamp-only DynamoDB change events, winning the production impact award at an Amazon organization-wide hackathon.

Agency for Science, Technology and Research (A*STAR)

Singapore | Data Science Intern | June 2018 – September 2018

- Developed SeizNet, a convolutional neural network for seizure detection using EEG data from 29 patients.
- Achieved 95.8% sensitivity at 0.17 false alarms per hour; a 2-channel configuration achieved 93.3% sensitivity and outperformed a traditional SVM baseline using all EEG channels.

EDUCATION

University of Southern California — M.S. in Computer Science | CGPA: 3.96/4.00 | May 2022
Selected coursework: Machine Learning, Analysis of Algorithms, Database Systems, Applied Machine Learning for Games, Estimation Theory, Random Processes, Applied Natural Language Processing

Bilkent University — B.S. in Electrical and Electronics Engineering | CGPA: 3.93/4.00 | June 2019

HONORS & AWARDS

- Two-time Amazon organization-wide hackathon winner among 20+ competing teams
- Annenberg Fellowship with admission to the USC PhD program (2019)
- IEEExtreme 10.0 (2016): 2nd in Turkey, 20th in IEEE Region 8, 65th global
- IEEExtreme 9.0 (2015): 3rd in Turkey, 30th in IEEE Region 8, 82nd global
- Nationwide University Entrance Exam (LYS): ranked in the top 300 out of 2 million students in Turkey (2014)
